Step 1 — Go back to Killercoda Terminal

Since you're running Airflow in Docker, execute this in the Killercoda terminal:

```
docker exec -it airflow bash
```

Then:

```
cd /opt/airflow/dags
```

Step 2 — Create the DAG file

Run:

```
cat > retail_sales_dag.py <<'EOF'
from airflow import DAG
from airflow.providers.standard.operators.python import PythonOperator
from datetime import datetime
import csv

def create_sales():
    with open("/tmp/retail_sales.csv", "w") as f:
        writer = csv.writer(f)
        writer.writerow(["product", "quantity", "price"])
        writer.writerow(["Rice", 10, 1200])
        writer.writerow(["Oil", 5, 1500])
        writer.writerow(["Sugar", 8, 800])

def calculate_revenue():
    total = 0

    with open("/tmp/retail_sales.csv", "r") as f:
        reader = csv.DictReader(f)

        for row in reader:
            total += int(row["quantity"]) * int(row["price"])
```

```
    with open("/tmp/revenue_report.txt", "w") as f:
        f.write(f"Total Revenue: {total}")

    print("Total Revenue:", total)

def show_report():
    with open("/tmp/revenue_report.txt", "r") as f:
        print(f.read())

with DAG(
    dag_id="retail_sales_pipeline",
    start_date=datetime(2025, 1, 1),
    schedule=None,
    catchup=False
) as dag:

    task1 = PythonOperator(
        task_id="create_sales",
        python_callable=create_sales
    )

    task2 = PythonOperator(
        task_id="calculate_revenue",
        python_callable=calculate_revenue
    )

    task3 = PythonOperator(
        task_id="show_report",
        python_callable=show_report
    )

    task1 >> task2 >> task3
EOF
```

Step 3 — Check the DAG

Run:

```
python retail_sales_dag.py
```

Then:

```
airflow dags list
```

Your DAG should appear once Airflow's DAG processor has discovered it.

Step 4 — Open Airflow UI

In your screenshot, click Dags on the left sidebar.

Find:

`retail_sales_pipeline`

Then trigger it manually.

Step 5 — Understand the workflow

create_sales

Creates retail_sales.csv

calculate_revenue

Calculates revenue and writes report

show_report

Prints final report in task logs

Expected Output

SHOW_REPORT TASK LOG

₹26,900

Total Revenue

Once the DAG succeeds, verify the file inside the Airflow container:

```
cat /tmp/revenue_report.txt
```
